WORK EXPERIENCE

UX DESIGNER & WEB DEVELOPER

Touchstone Group Associates

Cincinnati, OH *2015 - 2026*

Worked as part of a small-but-mighty team with the goal to make work fun with Ignite Recognition (igniterecognition.com), an employee engagement website and mobile app that gamifies everyday work tasks like training, social interaction, and metrics tracking.

My primary responsibilities were working with project management and development to design user experiences for features that include: an online store, a social-media feed, performance tracking and reporting, quiz creation and execution, site administration, peer recognition, and more.

I also served a few different roles as a middleware developer (using Vue JS with Typescript), front-end developer (HTML, CSS, & Vuetify), email developer (HTML & CSS), and support for back-end API development as needed (C# & SQL).

FRONT-END WEB DEVELOPER

MyMediabox, a division of Jonas Software USA

Cincinnati, OH *2013 - 2015*

Worked in a small team who built, upgraded, and maintained three web-based applications used for licensing intellectual property rights.

Developed user interfaces of new features by leveraging and extending HTML/CSS components and design patterns.

Designed and implemented an icon suite used throughout the applications.

Worked with clients to style their site portal in alignment with their brand standards.

USER INTERFACE DEVELOPER

Touchstone Group Associates

Cincinnati, OH *2007 - 2013*

Worked in a small to medium sized team who built websites for (mostly) automotive clients to measure, motivate, and reward their employees and dealers.

Styled over a dozen enterprise-level client sites using CSS frameworks and custom CSS to match the client's vision and brand standards.

Learned Adobe Flash & Actionscript to create a customizable user interface for a slot machine game used to reward employees.

Designed client websites to be mobile responsive for use with desktop & mobile browsers in a time when IE6 haunted every web developer.

Created and managed release calendar to keep associates across company departments up-to-date.
